Paper Reader Spike

Faithful layout, text layer, selection and highlights

This page uses the non-embedded base-14 fonts Helvetica and Helvetica-Bold, resolved by pdf.js through standard_fonts/.
The bar below is vector art; the square is a FlateDecode RGB image.
Both must be painted by page.render() with no loss.

Text extraction and normalisation

The reader must keep a faithful visual copy of the page. Selection is resolved from the rendered text layer, so the DOM spans have to line up with canvas pixels.

Whitespace runs, a non-breaking space, ‘curly quotes’, “double” quotes and an en dash – all appear on this page so normalised search can be exercised.

Whitespace collapsing must not change the stored item indexes.

The quick brown fox jumps over the lazy dog. 0123456789.

Highlight persistence is stored as normalised page-space rectangles.

Oblique line for font fidelity

CJK text (Type0 / UniGB-UCS2-H, no embedded font file):

中文检索测试跨语言排版

The line above must be extractable even though the font is not embedded.

Rotated page (/Rotate 90)

Rotation is applied by the viewport; the text layer stays in raw PDF space.
Selection rectangles on this page must still map back to the page box.
